

CAREER OPPORTUNITIES AT 3WIN

3WIN is a successful early stage company. Our mission is to develop innovative active implantable medical devices that enable medical professionals to better treat a list of disabling disorders.

Our developments achieved with close collaboration with the medical field, are cutting edge at multiple levels. They are in alignment with our mission to better treat people suffering from serious symptoms of Parkinson's disease, dystonia and other movement disorders, as well as individuals who are hard of hearing.

It is our ambition to become the European market leader in the fast growing neurostimulation field.

Our roots stem from the development activities at the Antwerp University's Laboratory of Medical Electronics headed by Professor Stefaan Peeters a globally recognized pioneer in the field of cochlear implants. Professor Peeters is currently responsible for 3WIN's R&D projects.

If you yearn for a new challenge in a young, innovative and high tech environment, we encourage you to contact us.

JOB OPPORTUNITY

3WIN is actively engaged in finding new talent to complement our multi-disciplinary team of engineers, surgeons and business developers.

Currently there is an immediate need to fill the position of:

ELECTRONICS / EMBEDDED SOFTWARE ENGINEER

Within the multi-disciplinary R&D team, tasks are divided according to skills and interest and are in line with the project plan. Teamwork and flexibility are keywords; your colleague is your client.

As an electronic engineer you would be responsible for the development and validation of systems and subsystems that are integral to 3WIN's implant electronic platforms.

The job consists of development, testing and validation tasks of the analog and digital hardware for power consumption and battery management, wireless communication, microcontrollers, embedded and PC test software.

ISO derived Quality standards are crucial part to the development of implantable medical devices and part of the development work at hand.

You will become member of a project team of about 5 engineers, where creative ideas, problem solving skills, discipline, daily and open communication and regular team meetings are the driving force behind the success of this project.

WHO ARE YOU?

- You have a practical approach
- You are hands on and all around
- You are smart and learn fast
- You are a team player
- You are demanding for yourself and others, you understand that the quality of your work is essential and request help when needed
- Your experience in developing and/or testing of analog and/or digital hardware is welcome but not demanded
- You are not limited by dogmatic thinking

WHAT MAY YOU EXPECT?

JOB OPPORTUNITIES AT

- A challenging job in an open and pleasant atmosphere together with young and driven engineers
- A job offering many learning opportunities and where you can advance your technical competencies
- You will be working on products with high relevance for society in general and patients in specific
- We offer competitive remuneration and exciting career opportunities in a challenging, creative and growing environment.

HOW TO CONTACT US

If you are interested please send your resume by e-mail to 3WINcareers@3WIN.eu or by regular mail to the attention of the Human Resources Department of 3WIN.
